

Gripper™

THE ASSISTANT IN A BOX

Gripper™

THE ASSISTANT IN A BOX

THE GRIPPER™ ALLOWS THE SURGEON TO CONTROL THE RETRACTOR WITHOUT EXTRA HELP FROM AN ASSISTANT

Human capital is the most important resource in the OR so it is extremely important that people can function optimally. The Gripper™ allows a stable retractor positioning so that nursing staff can now be deployed much more effectively during the procedure or in preparation for other operations.

A well-managed OR results not only in a high surgical turnover but also in reduced postoperative complications, improved patient-centered outcomes, greater patient satisfaction, improved ergonomics and increased productivity.

By using the Gripper™, surgeons are back in charge of their instruments. They determine the positioning, the force with which the retractors are placed and how long they stay in place. This allows the surgeons to be 100% focused on their job while the scrub is always one step ahead because he/she doesn't have to hold instruments.

24/7 AVAILABILITY

The Gripper™ is the assistant that is always sterile and available 24/7. In case of limited availability of staff, the procedure (scheduled or trauma) will not have to be postponed and will therefore not affect the efficient functioning of the OR.

OPTIMAL STAFF ALLOCATION

Because the Gripper replaces hand held retractors, they enable nurses to be allocated for more productive and urgent operations. This leads to parallel processing and optimal allocation of the OR staff.

BETTER TISSUE PRESERVATION

By using the Gripper™ the surgeon determines the force applied on the retractor which reduces the cutting effect on the bone and soft tissues. During fluoroscopy the retractor does not need to be removed which again reduces damage to the soft tissues.

INCREASED STABILITY

The surgeon places the Gripper™ with the correct force and direction so that the retractor can be positioned accurately and stable. The Gripper™ remains stable in its position even under the most demanding circumstances.

OPTIMAL VISIBILITY

The Gripper™ is connected to the side of the table improving the surgeon's view on the surgical field and anatomical landmarks which are not obstructed by the staff holding retractors.

IMPROVED EFFICIENCY

By using the Gripper™ the surgeon can focus 100% on the surgery without any distraction. The Gripper gives the surgeon more control over the procedure and makes it possible to standardize the process. Standardization leads to optimized efficiency, improved economics and increased productivity.

ITEM	DESCRIPTION	ART. CODE	UNIT	PACKED PER
Gripper™	Self Retracting System	ME-GR 1000	PC	10
Fixation Devices	Fixation Device Hip Set	ME-FD 1000	SET	1
	Fixation Device Table Adapter	ME-FD 3000	SET	1
	Fixation Device Knee Set	ME-FD 4000	SET	1
